There is a $200 basic publication charge assigned to each “Regular Paper” for ACES members and $250 charge for non-ACES members. All authors are allowed 6 printed pages per “Regular Paper” without an over page charge. Mandatory over page charge of $60 a page apply to all pages in excess of 6 printed pages.

There is a $100 basic publication charge assigned to each “Express Paper” for ACES members and $200 charge for non-ACES members. ACES “Express Papers” doesn’t allow for more than four pages. All authors must comply with the page limitations.

Corresponding authors should be active members of the society at the time of submission and the time of publication in order to receive the reduced charge. Printed copies of the Journal can be ordered from the ACES site using the order form available at http://aces-society.org/journal_order_form.php

ACES Journal is abstracted in INSPEC, in Engineering Index, DTEL, Science Citation Index Expanded, the Research Alert, and to Current Contents/Engineering, Computing & Technology.
GENERAL PURPOSE AND SCOPE: The Applied Computational Electromagnetics Society (ACES) Journal hereinafter known as the ACES Journal is devoted to the exchange of information in computational electromagnetics, to the advancement of the state-of-the-art, and the promotion of related technical activities. The purpose of such exchange is to inform the scientific community on the developments of new computational electromagnetics tools and their use in electrical engineering, physics, or related areas. The technical activities promoted by this publication include code validation, performance analysis, and input/output standardization; code or technique optimization and error minimization; innovations in solution technique or in data input/output; identification of new applications for electromagnetics modeling codes and techniques; integration of computational electromagnetics techniques with new computer architectures; and correlation of computational parameters with physical mechanisms.

SUBMISSIONS: The ACES Journal welcomes original, previously unpublished papers, relating to applied computational electromagnetics. Typical papers will represent the computational electromagnetics aspects of research in electrical engineering, physics, or related disciplines. However, papers which represent research in applied computational electromagnetics itself are equally acceptable.

Manuscripts are to be submitted through the upload system of ACES web site. See “Information for Authors” on inside of back cover and at ACES web site. For additional information contact the Editors-in-Chief:

APPLICATIONS FOR AUTHORS

Publication Criteria

Each paper is required to manifest some relation to applied computational electromagnetics. Papers may address general issues in applied computational electromagnetics, or they may focus on specific applications, techniques, codes, or computational issues. While the following list is not exhaustive, each paper will generally relate to at least one of these areas:

1. Code validation. This is done using internal checks or experimental, analytical or other computational data. Measured data of potential utility to code validation efforts will also be considered for publication.

2. Code performance analysis. This usually involves identification of numerical accuracy or other limitations, solution convergence, numerical and physical modeling error, and parameter inadequacies, diffraction theories, electromagnetic systems, and other special features.

3. Computational studies of basic physics. This involves using a code, algorithm, or computational technique to simulate reality in such a way that better, or new physical insight or understanding, is achieved.

4. New computational techniques or new applications for existing computational techniques or codes.

5. “Tricks of the trade” in selecting and applying codes and techniques.

6. New codes, algorithms, code enhancement, and code fluxes. This category is self-explanatory, but includes significant changes to existing codes, such as applicability extensions, algorithm optimization, program correction, and, for parallel programs, code enhancement, porting issues, and code improvements.

Note: Code (or algorithm) capability descriptions are not acceptable, unless they contain sufficient technical material to justify consideration.

7. Code input/output issues. This normally involves innovations in input (such as input geometry standardization, automatic mesh generation, or computer-aided design) or in output (whether it be tabular, graphical, statistical, Fourier-transformed, or otherwise signal-processed). Material dealing with input/output database management, output interpretation, or other input/output issues will also be considered for publication.

8. Computer hardware issues. This is the category for analysis of hardware capabilities and limitations of various types of electromagnetics computational requirements. Vector and parallel computational techniques and implementation are of particular interest.

Applications of interest include, but are not limited to, antennas (and their electromagnetic environments), networks, static fields, radar cross section, inverse scattering, shielding, radiation hazards, biological effects, biomedical applications, electromagnetic pulse (EMP), electromagnetic interference (EMI), electromagnetic compatibility (EMC), power transmission, charge transport, dielectric, magnetic and nonlinear materials, microwave components, MEMS, RFID, and MDM technologies, remote sensing and geometrical and physical optics, radar and communications systems, sensors, fiber optics, plasmas, particle accelerators, generators and motors, electromagnetic wave propagation, non-destructive evaluation, eddy currents, and inverse scattering.

Techniques of interest include but not limited to frequency-domain and time-domain techniques, integral equation and differential equation techniques, physical and geometrical optics, method of moments, finite differences, and other input/output database management, output interpretation, or other input/output issues will also be considered for publication.

In order to ensure an appropriate level of quality control, papers are peer reviewed. They are reviewed both for technical correctness and for adherence to the listed guidelines regarding information content and format.

PAPER FORMAT

Only camera-ready electronic files are accepted for publication. The term “camera-ready” means that the material is neat, legible, reproducible, and in accordance with the final version format listed below.

COVER 2 COVER 3

http://aces-society.org

SUBSCRIPTIONS:

All members of the Applied Computational Electromagnetics Society are entitled to access and download the ACES Journal of any published journal article available at http://aces-society.org. Printed issues of the ACES Journal are delivered to institutional members. Non-Institutional members can request a printed copy with the pre-paid fee which covers printing and shipping fees.

Back issues, when available, are $50 each. Subscription to ACES Journal and change of address requests should be sent directly to ACES office at:

Shanell Lopez
Electrical Engineering Department
Colorado School of Mines
310A Brown Building
1610 Illinois Street
Golden, CO 80401
salopez@mines.edu

Allow four weeks advance notice for change of address. Claims for missing issues will not be honored because of insufficient notice, or address change, or loss in the mail unless the ACES office is notified within 60 days for USA and Canadian subscribers, or 90 days for subscribers in other countries, from the last day of the month of publication. For information regarding reprints of individual papers or other materials, see “Information for Authors”.

LIABILITY: Neither ACES, nor the ACES Journal editors, are responsible for any consequence of misinformation or claims, express or implied, in any published material in an ACES Journal issue. This also applies to advertising, for which only camera-ready copies are accepted. Authors are responsible for information contained in their papers. If any material submitted for publication includes material which has already been published elsewhere, it is the author’s responsibility to obtain written permission to reproduce such material.
